American Recovery and Reinvestment Act and the HITECH Act

How Can We Help..?

MeTIS can help you make sense of the **American Recovery and Reinvestment Act and the HITECH Act**. We can chart a path that enables you to maximize the stimulus money your are entitled to and enable you to maximize your IT dollars so you can realize the maximum return on investment for every dollar spent. We will provide you with a free initial consultation to get you started.

What's the Scoop

The Stimulus Package: There is \$19 billion that's allocated to Health IT break down in the Stimulus Bill and there is \$2.1 billion that will be available to the Secretary of Health & Human Services for distribution through the Office of the National Coordinator for Health IT (ONCHIT). These funds will be spent on projects related to standards evaluation, development and infrastructure for health information exchange (HIE), grants to states for the purpose of furthering EHR adoption, improvements in telemedicine delivery, and the establishment of Regional Health IT Resource Centers.

There is an additional \$17 billion to be applied to longer term utilization incentive bonuses for providers meeting certain criteria.

What are the different incentive options? There are two incentive payment programs outlined under the HITECH Act – one through Medicare and another from Medicaid. Providers can only submit for payment of an incentive bonus from one of the programs so each clinic will need to analyze their organization's public payer mix to determine where they stand to benefit most. Both require that a provider prove **"meaningful use"** of an EHR product to qualify for the incentives, as well.

How does the bill define adequate EMR utilization? What does "meaningful use" actually mean?

Meaningful Use" is defined by:

1. Use of a Certified Product
2. EHR Record is connected for exchange of PHI
3. Complies with Submission reports on clinical quality measures

NOW WHAT?

We Can Help...

MeTIS Can ...

- Help you make sense of the **American Recovery and Reinvestment Act and the HITECH Act**.
- Chart a path that enables you to acquire the stimulus money that you are entitled to.
- Provide you with a resource to guide you through compliance and implementation of the technology and maximize your return on your investment.

Improving The Patient Experience is Our Bottom Line

Technology Does Not Have to Be Complicated or Have a Negative Impact on Your Bottom Line

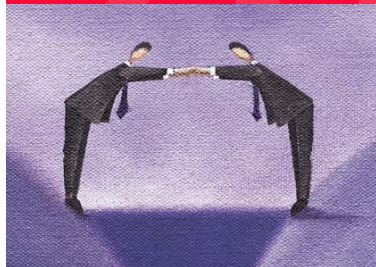

If your clinic is like most, you probably have one or more Technology managers, about half dozen vendors and numerous hard providers that you deal with everyday. You have watched your cost of doing business sky rocket while everywhere you turn there is someone offering you the latest greatest technological advance that will certainly improve your bottom line. At MeTIS, we put

our client's needs first, which means their patients! We believe that technology does not have to be complicated, expensive or take a whole department to manage. Truth is, advances in back office medical technology, whether they have been EMR solutions or PACS solutions have been very expensive to own and maintain. We decided enough was enough. Congress is suppose to be handling the insurance companies so we

thought we would tackle the technology vendors who are anything but innocent when it comes to the rising healthcare cost. Most have chalked up the price of technology as the cost of doing business. We believe there is a better way. Contact us today to improve your patient's experience and to learn how to maximize your technology investment.
